Re. Box I**Basis of the report**

The set of claims submitted with the letter of 18 March 2005 meets the requirements of PCT Article 34(2)(b) and serves as the basis for this report.

Re. Box V

Reference is made to the following documents:

D1: EP-B-0 858 478 (BASF AG) 19 January 2000

D4: WO 99/35208 A (DAETWYLER AG GUMMI & KUNSTSTOFF) 15 July 1999

Document D4 is considered the prior art closest to the subject matter of independent claims 1 and 6 and discloses (the references between parentheses refer to that document):

a water-swellable sealing composition that is based on a rubber matrix and contains a powdery,

water-absorbent material made from a combination of, for example, polysaccharides and a (meth)acrylate-based synthetic polymer (page 4; lines 7 to 20).

The subject matter of claims 1 and 6 thus differs from that of D4 in that the synthetic polymer is not modified using a hydrophilic side chain. The subject matter of claims 1 and 6 is therefore novel (PCT Article 33(2)).

The present invention can therefore be considered to address the problem of improving sealing properties in relation to water that contains electrolytes.

The solution to this problem as proposed in claims 1 and 6 of the present application involves an inventive step (PCT Article 33(3)) for the following reasons:

Although cross-linked polymers with (meth)acrylic acid esters of polyethylene glycols and the use thereof in powder form in sealing materials is known from D1 (paragraphs [0020] and [0069]), neither D4 nor D1 indicates that this super absorber can be used in a rubber matrix to specifically solve the problem of re-swelling and to improve sealing in relation to water that contains electrolytes.

Claims 2 to 5 are dependent on claim 1 and

therefore likewise meet the PCT requirements for  
novelty and inventive step.

**Box No. VIII**      **Certain observations on the international application**

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made:

Contrary to PCT Rule 5.1(a)(iii), the description is inconsistent with the claims.

The indications relating to the type of side chain S in the description, page 3, line 7 ("preferably") and page 3, line 27 to page 4, line 8 (alternative hydrophilic side chains), create the impression that the subject matter for which protection is sought does not match that defined in the claims and thus result in a lack of clarity (PCT Article 6) when the description is used to interpret the claims.
